

ACKNOWLEDGMENT OF REDUCED POLYGRAPH ACCURACY

I, \_\_\_\_\_, have been advised of the reduced accuracy inherent in multiple-issue polygraph testing. It was explained to me that a specific (single) issue polygraph is the most accurate type of examination available, and that incorporating more than one relevant question into a single polygraph exam will reduce the overall accuracy of the exam. I understand the probability of an error being made in the exam may be more than twice as high. I also understand that the probability of an inconclusive result will go up as well. Nonetheless, and with this understanding, it is my request that my examiner proceed with the polygraph examination of \_\_\_\_\_ using a multiple-issue testing format.
